 126,228,460	Different home, contact, attendees, speakers. having different layouts will help make more interesting designs for our WordCamp Sites.	Friday, May 22nd 4:20AM
 126,191,663	I can see how offering the option for custom page templates could be opening a can of worms, I think just having more themes to choose from would be fine.	Thursday, May 21st 3:22PM
 126,188,212	Would be nice to have some more flexibility with the content, but I also understand the need to have something that just works out of the box.	Thursday, May 21st 2:32PM
 126,107,826	I think the current selection of themes is more than enough	Wednesday, May 20th 11:23AM
 126,074,200	SVG has become standard and currently the only way is to host externally or inline in CSS as base64 encoded string.	Wednesday, May 20th 3:34AM
 126,046,771	It took me ~30+ hours to build a ok WordCamp site because I had to use a default theme and the Jetpack CSS editor. Had I the ability to use my own workflow, plugin set, and code locally, I could have created it in half the time and the end product would have been much more interactive, useful, and impressive.	Tuesday, May 19th 2:59PM
 125,937,906	I actually quite like the challenge of working with an existing theme. It pushes organisers to be creative with the tools available and we have seen some great results over the years.	Monday, May 18th 9:15AM
 125,787,222	Would like to create a base then be able to clone it, rather than having to start from scratch each year.	Tuesday, May 12th 7:06PM
 125,623,227	I understand that adding own PHP/templates could cause security issues. Perhaps it would be possible to add your own JavaScript/jQuery for more flexibility with the layout. I got pretty used to the limitations of the multisite.	Friday, May 15th 1:00AM
 124,968,824	We have a lot of other things to do, and being able to choose another theme to start with is a lot quicker than making new templates. The shortcodes cover a lot of templates needed.	Wednesday, May 6th 6:29AM
 124,930,935	Honestly, themes with much more customizer options + CSS editor for additional tweaks would be perfect.	Tuesday, May 5th 4:55PM
 124,927,100	some form of template or shortcode structure to build a template without having to edit php might be nice	Tuesday, May 5th 3:38PM
 124,927,062	I understand it's a security issue to allow people to add/edit templates with wild abandon, but even having a segment of a template we could edit would be helpful. The fact that you can't add tags to templates is a pain and forces you to use CSS pseudo elements and other trickery to get images in the theme. If there could be a section of the header that can be editable I could add images.	Tuesday, May 5th 3:47PM
 124,925,887	Would be really helpful when just CSS isn't suiting my needs, especially around the way schedules, speakers, and attendees are displayed.	Tuesday, May 5th 3:30PM
